

BeeAware

GLOBAL BRAND SYSTEM 2.1

A scalable identity for one global brand across the UK, Brazil, Spain, Portugal and future markets.

Brand strategy - visual identity - localisation - iconography - UI language - map system - asset specification

August 2026 | Corrected asset edition

01. Brand evolution

BeeAware evolves rather than restarts. The bee, orange signal colour, hexagonal geometry, location logic and distinctive BeeAware name remain recognisable. The global system turns the bee from a mascot into a symbol of awareness: a community sensor that sees, connects and signals.

Brand architecture

There is one master brand: **BeeAware**. Country names are descriptors in product, legal, SEO or campaign contexts, never separate logos. The name is never translated. Tagline, interface language, editorial voice and data sources are localised.

Positioning

BeeAware occupies the **Urban Awareness** territory. Safety is a major vertical, while the brand remains broad enough for crime, road incidents, emergencies, disruption, fires and community signals.

Brand idea

Awareness through community intelligence. Public data + trusted sources + community signals become understandable, geographically honest information about what is happening around you.

02. Logo system

BeeAware

Universal master: symbol + BeeAware wordmark, without a fixed tagline. This is the default global corporate mark.

BeeAware

Know what's happening around you.

Localized lockups: use the master mark plus a market-specific line. Version 2.1 uses a wider vector canvas and additional right-side safe area so no tagline is clipped.

Clear space: at least one eye-lens diameter around the complete mark. **Minimum size:** symbol 20 px digital / 7 mm print; full wordmark 90 px / 28 mm.

Do not: add flags, police shields, sirens, country colours, bevels, heavy shadows or fear-led imagery.

03. Colour system

Signal Orange	#FF9D00	Brand / selected actions
Awareness Amber	#FFB800	Pulse / attention
BeeAware Ink	#222831	Primary text / dark
Slate	#586274	Metadata / secondary
Warm Cream	#FFF8EA	Calm background
Context Mint	#DDF6EA	Low concern context
Context Blue	#DCEEFF	Official / information
Context Red	#FFE1DE	High attention only

Orange identifies BeeAware. Red identifies attention. They are not interchangeable.

04. Typography

Primary: Inter. SemiBold/Bold for headlines and navigation; Regular/Medium for body and UI. Fallback: Inter, Noto Sans, system-ui, Arial, sans-serif.

The typography should feel calm, modern and credible - approachable without becoming playful or childlike.

05. Global localisation

Market	Brand	Primary line
Global / EN	BeeAware	Know what's happening around you.
Brazil	BeeAware	Fique ligado ao que acontece ao seu redor.
Spain	BeeAware	Entérate de lo que ocurre a tu alrededor.
Portugal	BeeAware	Saiba o que acontece à sua volta.

Localisation is meaning-led, not literal. BeeAware and the core symbol never change.

06. Iconography

Core icons use a 64 x 64 grid, rounded line caps and simple geometry. Avoid police-specific symbols so the system remains globally portable.

	Nearby	Core UI
	Report	Core UI
	Route	Core UI
	Verified	Core UI
	Community	Core UI
	Source	Core UI

07. Product language

Avoid	Prefer
Dangerous area	Activity above the area's recent baseline
Safe route	Route with fewer recent safety signals
Crime hotspot	Higher concentration of reported incidents
Threat detected	Recent signal / active official alert
This area is safe	No elevated recent signal identified

Tone: calm, factual, transparent and human. BeeAware informs without sensationalising and communicates uncertainty explicitly.

08. Map & signal system

Official: informational blue. **Community:** BeeAware orange. **Road:** amber. **High attention:** contextual red, used sparingly. Source and confidence must never be communicated by colour alone.

Pins are reserved for exact or street-level data. Neighbourhood or city data uses polygons, clusters or area cards - never invented precision.

09. Photography & illustration

Use real urban environments, movement, community and context. Avoid staged fear, weapons, police tape as decoration, surveillance clichés and imagery that stereotypes neighbourhoods.

Illustration uses map geometry, routes, signals, hexagonal community motifs and restrained bee references. The bee is an intelligence symbol, not a cartoon character repeated on every screen.

10. App icon & digital assets

The app icon uses the symbol only: no wordmark and no tagline. Test at 16, 24, 32, 48 and 64 px.

SVG is the source of truth. Transparent PNG is an export format for digital placement.

11. Governance

Never localise: BeeAware name, core symbol, primary orange, master proportions.

Localise: tagline, product copy, feature labels, editorial examples, source badges and legal language.

12. Asset package

Included: master logo, primary symbol, wordmark, corrected EN/PT-BR/ES/PT-PT lockups, monochrome variants, transparent PNG exports, SVG masters, core UI icon set and README.

BeeAware

One global brand. Locally meaningful awareness.
